

# How do I transport TENORM material?

1. Facility Radiation Safety Officer (**RSO**) is notified of the need to transport **TENORM** material on, or across, a public roadway.

2. The **TENORM** shipment is surveyed with an approved and properly calibrated survey meter by trained personnel.

3. Based on survey results, the **TENORM** shipment is properly classified.

4. Based on the **TENORM** shipment classification, the appropriate markings, placarding, covering, and instructions are followed.

5. A properly completed Bill of Lading is generated for the **TENORM** shipment if classified as a radioactive shipment.

6. The driver receives instructions if the **TENORM** shipment is transported on, or across, a public roadway.

7. All documents used for the **TENORM** shipment are retained by the **RSO** (this includes weigh tickets).
